APPENDIX 1: STATEMENT OF GOALS AND PRINCIPLES

Overarching mission of the campaign
To achieve resilient, sustainable urban communities by engaging partners from public, private and social sectors worldwide.

Problem statement
The first decade of the twenty-first century has been marked by overwhelming challenges including a food crisis, an energy crisis, a financial crisis, and a growing realization of the consequences of climate change. Thousands of organizations are developing tools and offering policy options to meet these challenges. But these activities are disparate and tend to ignore an equally unprecedented megatrend: that the world is undergoing an irreversible process of rapid urbanization. Failure to accommodate this megatrend has resulted in unsustainable forms of production and consumption, poverty and social exclusion, and pollution. While cities are part of the problem, they are also primary victims and they must be part of any solutions. Such solutions will require placing cities at the centre of strategies for change. They will also require new ways of thinking, new levels of understanding between stakeholders, and new partnerships.

Goals
The partners of the World Urban Campaign seek to advance the following goals:
1. TO UNITE: convince public, private and social stakeholders that investing in creative, resilient and sustainable cities and communities is essential to our future.
2. TO ENABLE: provide the necessary tools to achieve creative, resilient and sustainable cities and communities.
3. TO MEASURE: establish benchmarks, monitor progress and share knowledge worldwide.
4. TO CONNECT: create synergies and lasting linkages between stakeholders and facilitate the coherent and strategic coordination of partners.

Principles of the Campaign

---

*Adopted in Paris at the second WUC Steering Committee meeting on 9 December 2009.*
Sustainable urbanisation is understood by all partners as a process which promotes an integrated, gender-sensitive and pro-poor approach to the social, economic and environmental pillars of sustainability. This integrated approach further requires that investments be made in new forms of technology and inclusive governance. More specifically, the principles of sustainable urbanisation involve:

(i) Accessible and pro-poor land, infrastructure, services, mobility and housing;
(ii) Socially inclusive, gender sensitive, healthy and safe development;
(iii) Environmentally sound and carbon-efficient built environment;
(iv) Participatory planning and decision making processes;
(v) Vibrant and competitive local economies promoting decent work and livelihoods;
(vi) Assurance of non-discrimination and equitable rights to the city; and
(vii) Empowering cities and communities to plan for and effectively manage adversity and change.
